Introducing uniFLOW for SMB.

Now, Canon puts the printing control deployed by big businesses within reach of small and medium-size businesses.

The logo for uniFLOW, featuring the word "uni" in black and "FLOW" in red, with a graphic of several overlapping squares in various shades of gray above the text.

For years, larger organizations have been able to take advantage of the benefits of strategically managing their copying and printing functionality, substantially reducing their “fixed” printing costs and securing a significant competitive advantage over smaller companies.

With uniFLOW for SMB, Canon is bringing the industry’s most powerful printing management solution within reach of small and medium-size businesses, delivering, for the first time, the key functionalities enjoyed by larger organizations in one strategically configured, easy-to-deploy, cost-effective product. With uniFLOW for SMB, your business can benefit from detailed activity reports, highly secure printing capabilities, easy printing for mobile users, and much more.

Gain printing environment control

In nearly every office, a significant proportion of printing costs are being wasted through unnecessary color printing, excessive non-business usage, failure to select the device best suited for a particular job, and many other common inefficiencies. In fact, industry studies suggest that organizations can reduce costs by as much as 30% or more by optimizing their printing environment.

Canon uniFLOW for SMB allows you to quickly reclaim these excessive costs. The software can track all usage and deliver detailed customized reports so that you can quickly see who’s printing what, when, and where, and act accordingly to encourage responsible printing behaviors. It also enables fact-driven management of print functions, giving you the power to limit color printing, force duplex printing, send jobs to more cost-effective printers based on size or other desired criteria, avoid releasing unclaimed print requests, or even require management authorization for jobs of a certain size or type.

In short, uniFLOW for SMB puts you in absolute control of your printing environment, so you can reduce costs, enhance security, and increase employee productivity.

In addition, your reduced consumption will also be a boost to your organization’s green and sustainability initiatives, and, justly, a source of pride for your employees and customers alike.

Attribute costs down to the penny

For many organizations, printing is a purely centralized, out-of-pocket overhead cost. But, this is often simply because there's no practical way to accurately allocate costs to a particular account or department. With uniFLOW for SMB, you can track your exact costs, and use this data to accurately charge back clients or maintain monthly printing budgets for individuals, work-groups, or departments. uniFLOW for SMB can help to ensure that no avoidable printing costs ever have to be absorbed by your company.

Full support for mobile printing

Many executives, traveling staff, and other mobile device users have found that they miss the ability to quickly and easily print from these devices, thereby bringing their personal efficiency way down.

uniFLOW for SMB lets you provide visiting executives, sales personnel, and others with temporary or permanent mobile printing capability with the same level of security as in-house desktop users.

Create an ultra-secure printing environment

Many organizations frequently work with confidential or sensitive documents that, if viewed by unauthorized personnel, could lead to significant ethical, legal, regulatory, or financial repercussions. And, although most organizations take great pains to secure these documents on their computer networks, efforts to protect them from lying vulnerably in a printer tray are often lacking.

uniFLOW for SMB brings you the same security that's become the standard in the largest and most security-conscious organizations. With uniFLOW Secure Follow Me Printing, employees send a job to the printer, then go to the device and swipe their ID card or enter a unique code or PIN. Only then is the job released—and delivered securely into their waiting hands. This feature also allows jobs to follow employees to any printer, so they can, for example, avoid a printer that's out of order or retrieve a job from a printer closer to a remote meeting location.

Easy to install, easy to maintain

From an IT standpoint, uniFLOW for SMB is easy to get up-and-running, and it works within your existing infrastructure, utilizing the same security cards, log-in procedures, and other previously enabled functionality. In fact, for perhaps the first time since your printers were networked, uniFLOW for SMB gives you and your IT department the tools to *really* manage them.

Secure Print job selections on device UI

Put uniFLOW for SMB to work in your business today

If yours is a small or medium-size business, contact your Canon Authorized Dealer to learn more about putting the powerful advantages of uniFLOW for SMB to work for you. Built for your budget, uniFLOW for SMB will quickly pay for itself by helping you regain control of your printing environment, improving your document security, delivering the convenience of fast and easy mobile printing, and, overall, helping you get an edge over your competitors—of all sizes.
