

ADVANCED SOLUTIONS  
FOR EDUCATION  
PROFESSIONALS

## Connecting Devices with Cloud Platforms

Students expect a connected campus. Faculty and staff depend on it to perform routine tasks, support students, and meet expectations of the school's leadership. Connecting devices with cloud collaboration and storage platforms is critical to the mission of education organizations and it can be simple to achieve. Canon offers solutions that can help your school promote interoperability, enhance user experience, and support collaboration.

### THE BENEFITS OF A CONNECTED CAMPUS

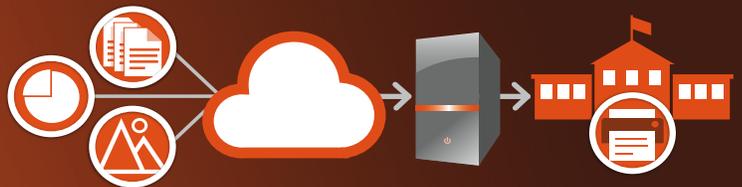

#### Connecting Students

Are you supporting student success by providing them with an easy way to print from, and scan to, cloud platforms while on campus and on the go?

#### Connecting Staff

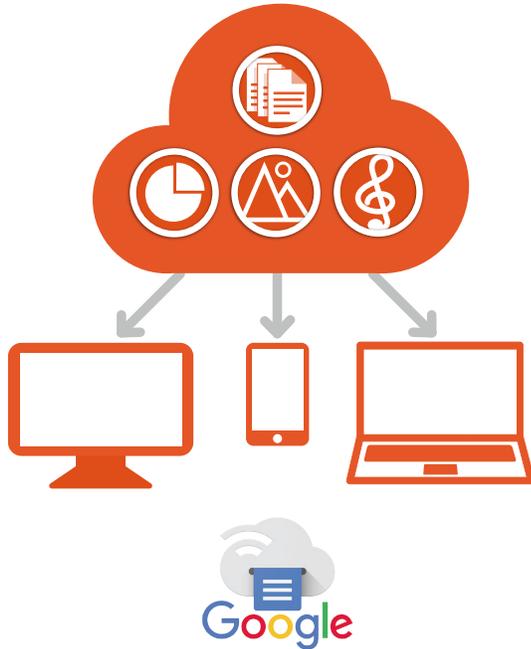

Are you enabling your teachers and staff to perform at their best when it comes to interdisciplinary and cross-functional tasks that involve input and output?

Whether it's done through native applications or integrated solutions, connecting your multifunction devices with users' Google cloud accounts and other enterprise collaboration tools can be easily accomplished and it can bring great value to students, faculty, and staff.

## CONNECTING YOUR CANON PRINTERS ACROSS YOUR SCHOOLS' GOOGLE ECOSYSTEM

You can configure Google Cloud Print on your cloud-ready Canon Multifunction Printer (MFP) model and enable users to print from their Gmail and Google Docs accounts on their mobile devices. You can do the same from compatible Google Chrome browsers and Chromebooks, too.

Google Print with compatible Canon MFP printer

## CLOUD AND MOBILE PRINTING

You may also connect your compatible Canon MFP with your Google Drive account using solutions that can be integrated with it, such as uniFLOW and uniFLOW Online. uniFLOW offers added benefits, including scanning and distribution functionality and printing from compatible mobile devices as well as other popular cloud services such as Microsoft OneDrive®, Dropbox®, and Box®. With uniFLOW, you can also take your organization's print infrastructure to a whole new level, opening up opportunities to connect with other enterprise applications.

Other compatible cloud and mobile printing solutions, such as EFI M600 for self-serve mobile printing with card payment features are great for school campuses and libraries.

### ADDED BENEFITS OF uniFLOW

Many educators now use Google Drive™ continuously to store lesson plans and course documents and Canon has multiple ways to use the imageRUNNER ADVANCE system to interact with a users' Google Drive account. From the touch screen of the MFP, teachers and faculty can retrieve saved course documents directly from their Google Drive folder using uniFLOW. In addition, uniFLOW allows users, through their Google accounts, to store their documents in the cloud on Google's servers and print to Web-connected printers from any compatible Web-enabled device, from phones to tablets to Chromebooks to PCs.

With a consultative approach tailored for your organization and an awarded service and support, Canon can help you take the next step to implement, improve, or enhance device connectivity to fit your unique learning environment.
